DETAILED ACTION

Allowable Subject Matter

Claims 1-5 are allowed over prior art of record.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Regarding claim 1:

The prior art of record neither anticipates nor renders obvious the claimed subject matter of the instant application as a whole either taken alone or in combination, in particular, prior art of record does not teach “...**growing the epitaxial layer, wherein the temperature of said surface of said semiconductor substrate to be used is indirectly controlled by adjusting said heating temperature and a reproducible vapor phase growth method for growing an epitaxial layer on semiconductor substrates of a single crystal...**” in combination with the remaining limitations of the claim.

Re. claim 1, Kainosho discloses method of forming semiconductor substrates of a single crystal, comprising: measuring a resistivity of arbitrary semiconductor substrates at a room temperature(Note: the single crystal with cutting positions can be considered as arbitrary semiconductor substrates and each substrate is going to have different temperature before undergoing annealing and since temperature is inversely proportional to resistivity the resistivity of arbitrary substrate is also measured)(Column 3, lines 10-14) ; obtaining respectively a relationship between a heating temperature and

a temperature of a surface of the arbitrary semiconductor substrates(Column 3,lines 14-20, the temperature before heating can be considered as the temperature of a surface of the arbitrary semiconductor substrates and temperature after annealing can be considered as the heating temperature of the arbitrary substrates), for the arbitrary semiconductor substrates having different resistivities(cutting of single crystal can lead to different arbitrary semiconductor substrates with different cutting positions with different temperature and since temperature is inversely proportional to resistivity , the arbitrary substrates will have different resistivities) , the relationship depending on different cutting positions of the single crystal(Column 3,lines 9-20); setting and adjusting said heating temperature of a semiconductor substrate to be used based on (i) a measured resistivity of the semiconductor substrate to be used and (ii) the obtained relationship between the heating temperature and the temperature of the surface of said semiconductor substrate(Column 3,lines 20-25) but does not teach **growing the epitaxial layer, wherein the temperature of said surface of said semiconductor substrate to be used is indirectly controlled by adjusting said heating temperature and a reproducible vapor phase growth method for growing an epitaxial layer on semiconductor substrates of a single crystal.**

Therefore, prior art of record neither anticipates nor renders obvious the instant application claimed invention as a whole either taken alone or in combination.

Claims 2-5 are also allowed as being directly or indirectly dependent of the allowed independent base claim.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
